

RAVENOL Motorstarter-Spray

Kategorie: Car care products

Artikelnummer: 1360034

Application: Workshop equipment, Passenger car, Motorcycle, Agricultural machinery, Oldtimer, Hobby and garden

0.4L | 1360034-400

RAVENOL Motorstarter-Spray is a spray to increase the ignition of gasoline and diesel engines after prolonged disuse or adverse weather conditions.

RAVENOL Motorstarter-Spray is a mixture of combustible solvents and compressed gases formulated to make it suitable for use in all petrol and diesel engines in passenger cars, trucks, construction equipment, all types of marine and boat engines, as well as agricultural equipment. Provides a safe and secure cold start even in the coldest temperatures, whilst helping to preserve battery and starter motor life. Although not intended as a long-term solution.

RAVENOL Motorstarter-Spray is designed to be ideal for occasional cold start problems.

Application instructions

Spray **RAVENOL Motorstarter-Spray** approx 2-3 seconds directly into the air filter or air intake and start the engine immediately.

For petrol engines, only a small touch on the accelerator whilst turning the starter should suffice to successfully start the engine.

For diesel engines, fully depress the accelerator at the same time as starting the engine - do not allow glow plugs/heating elements to activate before starting.

Characteristics

- Suitability for petrol and diesel engines
- Safe cold start
- Improvement of starting characteristics even after prolonged disuse
- Economical in use
- Easy and safe ignition
- Protection of batteries and motors
